

Your LaTeX Blog Title

Your Name

April 6, 2026

A minimal LaTeX blog template for GitHub Pages.

Introduction

This repository is a lightweight starting point for publishing a blog post, essay, or technical note written in \LaTeX .

You only need to edit `main.tex`, push to GitHub, and let GitHub Actions compile and deploy the result.

Why this template exists

Many personal sites want the simplicity of writing in \LaTeX , but also want a clean web page for reading and sharing. This template keeps the workflow small:

- write in \LaTeX
- compile automatically in CI
- publish the PDF with a simple HTML wrapper

How to customize

Replace this content with your own post. You can freely add sections, equations, figures, references, or bilingual text.

For example, you can add a link like this: [GitHub](#).

Next step

Turn this into your own blog post and publish it.
